

ABSTRACT OF THE DISCLOSURE

An apparatus has a holding means for holding output
images in a first size and their output positions, and output
5 images in a second size and their output positions, and
determines an output image and rendering position
corresponding to the output size of the output image
calculated based on the ratio of change in output position
of the output image between the first and second sizes upon
10 designation of the output size of the output image, thus
rendering an image.
